

$$P_6. \text{ a. } d_{prop} = m/s$$

$$\text{b. } d_{trans} = L/R$$

$$\text{c. } d = m/s + L/R$$

d. 刚到链路上

e. $d_{trans} < d_{prop}$ 所以该比特在链路中传播中

f. $d_{trans} > d_{prop}$ 该比特已经到达了目的路由器

$$\text{g. } m/s = L/R = \frac{120}{56000} = \frac{m}{2.5 \times 10^8} = 5.36 \times 10^{-5} \text{ m}$$

$$\text{g. } m = \frac{L}{R} \cdot s = \frac{150 \times 10^8}{10 \times 10^6} \cdot 2.5 \times 10^8 = 3.75 \times 10^4 \text{ m} = 3 \times 10^5 \text{ m}$$

$$P_7. \quad t_1 = \frac{56 \times 8}{64 \times 10^3} = 7 \times 10^{-3} \text{ s} = 7 \text{ ms}$$

$$t_2 = \frac{56 \times 8}{10 \times 10^6} = \frac{2.24 \times 10^{-4}}{5} \text{ s} \quad \cancel{t_3 = 10^{-2} \text{ s}} = 0.0448 \text{ ms}$$

$$T = t_1 + t_2 + t_3 = 17.0448 \text{ ms}$$

$$P_{15}. \text{ a. } R \cdot t_{prop} = 5 \times 10^6 \cdot \frac{2 \times 10^4 \times 10^3}{2.5 \times 10^8} = 4 \times 10^5 \text{ bit}$$

$$\text{b. } t_{prop} = \frac{2 \times 10^7}{2.5 \times 10^8} = 0.8 \times 10^{-1} = 0.08 \text{ s}$$

$$\therefore L_{max} = t_{prop} \cdot R = 5 \times 10^6 \times 8 \times 10^{-2} = 4 \times 10^5 \text{ bit}$$

c. 链路比特最大值

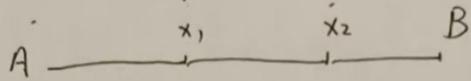

$$\text{d. } d_1 = \frac{2 \times 10^7}{4 \times 10^5} = 50 \text{ m}, \text{ 不比一个足球场长}$$

$$\text{e. } d_1 = \frac{m}{R \cdot t_{prop}} = \frac{m}{R \cdot \frac{m}{s}} = \frac{s}{R} \quad | \textcircled{1}$$

$$P_{33.} \quad n = \frac{F}{S} \quad t = \frac{80+S}{R}$$

王成章

202300130150

$$\therefore \bar{F}_{\text{tot}} = \frac{\bar{F}}{S} \cdot (80 + S) = \frac{80\bar{F}}{S} + \bar{F} \text{ bit}$$

$$t_1 = \frac{\bar{F}_{\text{tot}}}{R} = \frac{80\bar{F}}{RS} + \frac{\bar{F}}{R}$$

$$t_2 = \frac{80+S}{R} \times 3 = \cancel{\frac{3S+240}{R}} - \frac{2S+160}{R}$$

$$\bar{T} = t_1 + t_2 = \cancel{\frac{3}{R}(S+80)} + \frac{80\bar{F}}{RS} + \frac{\bar{F}}{R} \cancel{\frac{3S}{R}} + \frac{80\bar{F}}{RS} + \frac{\bar{F}}{R} \cancel{\frac{240}{R}}$$

$$\Rightarrow \frac{\bar{F}}{R} + \frac{240}{R} + 2\sqrt{\frac{240\bar{F}}{R^2}} = \frac{\bar{F}}{R} + \frac{240}{R} + \cancel{\frac{\bar{F}}{R}} \cancel{+ \frac{8\sqrt{15\bar{F}}}{R}}$$

$$\bar{T} = \frac{1}{R} \left(\frac{80\bar{F}}{S} + \bar{F} + 2S + 160 \right)$$

$$= \frac{1}{R} \left(\frac{80\bar{F}}{S} + 2S + 160 + \bar{F} \right)$$

$$\therefore \frac{1}{R} \left(\sqrt{160\bar{F}} + 160 + \bar{F} \right)$$

$$(\text{当且仅当 } 2S^2 = 80\bar{F}$$

$$S = 2\sqrt{10}\bar{F} \text{ 时 " = " 成立})$$

$$\therefore S = 2\sqrt{10}\bar{F}$$
